### **DETAILED ACTION**

This application has been examined. The claims 1-16 are allowed.

#### ***Reasons For Allowance***

1. The following is an examiner's statement of reasons for allowance: The present invention is directed to an image signal repeater apparatus comprising a image signal composed of multiple frames and a synchronization signal corresponding to said image signal, and then outputs each signal. The combination of the closest prior art of Someya et al. (US 6,924,796) and Shu et al. (US 6,778,170) and Nishitani et al. (US 2001/0045947) showed a similar invention, however, they fail to teach a clock replacing section which replaces a clock signal which is based on a synchronization signal corresponding with an image signal output by said image signal receiving section, with an internally generated replacement clock signal, and recovers an input image signal using the replacement clock signal; and an image signal transmission section which converts the recovered image signal output from said clock replacing section, to a digital transmission signal, and outputs the converted signal as claims 1 and 9.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
